Volumetric Charge (Per 1,000 Gallons)		
2,000+	\$ 11.34	\$ 11.34

Winter averaging is based on the average amount of water that customers use during their December, January and February usage periods (November 15 to February 15). The calculated winter average is applied to the customer's April bill, which invoices usage from February 15 to March 15. Please note that these date ranges may fluctuate by up to two days. If no winter average can be calculated, 5,400 gallons is used.

Commercial volumes based on water volumes each month.
